

SOFTWARE REQUIREMENTS SPECIFICATION

Multi-Industry SaaS CRM Platform

Built to Out-Feature Zoho, HoneyBook & GoHighLevel

Prepared for: Finconnex Financial Services Pty Ltd (Connex Group)

Prepared by: Nepatronix Technology Pvt. Ltd.

Version 2.0 | July 2026

Document Type: Functional / Software Requirements Specification (SRS)

1. PURPOSE & SCOPE

This Software Requirements Specification (SRS) describes every module, field, action, and feature of the Platform in detail. It is written to a standard that stands up against established players — Zoho CRM, HoneyBook, and GoHighLevel — and adds two things they do not offer out of the box: (a) an Industry Template Engine that reconfigures the entire CRM for the user's vertical at sign-up, and (b) native AI woven through every writing and triage surface, not bolted on as a separate add-on.

2. COMPETITIVE POSITIONING

The table below benchmarks the Platform against the two products most often used as the reference point for this build.

Capability	This Platform	Zoho CRM	HoneyBook
Industry auto-configuration at sign-up	Yes — 10 preset verticals + custom	No — manual setup only	Limited — service-business templates only
Unified inbox: Facebook + Instagram + WhatsApp + SMS + Email in one thread	Yes, native	Partial, via paid add-ons	No
AI in Notes / Email / SMS / Templates	Yes, native across the platform	Zia AI — separate add-on, limited surfaces	No native AI
Multiple brands / workspaces on one account	Yes — Workspace Switcher	Requires multiple licences	No
Proposal → Contract → Invoice → Payment in one flow	Yes	Requires Zoho Sign + Zoho Books	Yes — HoneyBook's core strength
Broker/team Linktree-style public pages	Yes	No	No
E-Signature built in	Yes, native	Add-on (Zoho Sign)	Yes
Source code ownership	Yes — Client owns 100% of source code	No — closed SaaS	No — closed SaaS
Pricing model	One-time build + optional annual support	Per-user/month subscription	Per-user/month subscription

The two standout differentiators are the Industry Template Engine (Section 3) and full source-code ownership (Contract Clause 5) — neither Zoho nor HoneyBook lets the client own or resell the underlying platform.

3. INDUSTRY TEMPLATE ENGINE (VERTICAL AUTO-CONFIGURATION)

At sign-up, a new account selects its industry from a preset list. The Platform then automatically provisions the pipeline stages, custom fields, starter template pack, dashboard KPIs, module visibility, and compliance footer text for that industry — turning a generic CRM into a purpose-built one in minutes, not weeks.

3.1 How Industry Selection Works

- Onboarding Wizard asks "What industry are you in?" with the preset list below, or "Start from blank / custom".
- The system auto-provisions: Lead/Deal pipeline stages, custom fields on Leads/Contacts/Deals, a starter Template Pack (Email, SMS, WhatsApp, Document), the Dashboard KPI widget set, and any compliance disclaimer merged into every outbound template footer.
- Industry-only modules are switched on automatically — e.g. a Lenders Panel for Mortgage, Property Listings for Real Estate, Trust Account tracking for Legal — and hidden for industries that don't need them.
- Everything provisioned is a starting point, not a lock-in: an admin can edit any stage, field, template, or KPI afterward from Settings → CRM Configuration.
- Workspace Switcher — a single Nepatronix-built instance can host multiple industry workspaces under one login, so the Connex Group can run Finconnex (mortgage), WorkConnex (recruitment), EduConnex (migration/education), and NatureConnex (trades) as four independently configured, separately branded workspaces on one platform.

3.2 Preset Industry Verticals

Industry	Pipeline / Stages	Key Custom Fields	Starter Template Pack	Dashboard KPIs	Compliance Footer
Mortgage & Finance Broking (e.g. Finconnex)	New Enquiry → Pre-Qualification → Application Submitted → Conditional Approval → Unconditional Approval → Settled	Loan Amount, Lender, Loan Type, LVR, Interest Rate, Credit Representative No.	Pre-approval email, rate comparison SMS, settlement congratulations, annual review reminder	Loans Settled, Total Loan Value, Avg Approval Time, Commission Pipeline	Credit Representative Number & ACL disclosure auto-footer
Accounting & Bookkeeping	Enquiry → Discovery Call → Engagement Letter Sent → Onboarded → Active Client → Tax Time → Renewal	ABN/ACN, Entity Type, Service Type, Financial Year End, Xero/MYOB/QuickBooks Link	Engagement letter, BAS reminder, tax-time checklist, year-end wrap-up	Active Clients, Avg Fee/Client, Overdue Lodgements, Retention Rate	Tax Practitioners Board registration auto-footer
Real Estate & Property	New Enquiry → Appraisal Booked → Listed → Under Offer → Sold/Leased	Property Address, Listing Price, Property Type, Bed/Bath, Vendor/Landlord	New listing alert, open home reminder, offer received, settlement congratulations	Active Listings, Avg Days on Market, Sales Volume, Commission Pipeline	Agency licence number auto-footer
Legal Services	Enquiry → Conflict Check → Engagement Signed → Matter Active → Billing → Closed	Matter Type, Matter Number, Fee Arrangement, Trust Account Ref.	Engagement letter, matter update, invoice reminder, matter closure	Active Matters, Billable Hours, WIP Value, Trust Balance	Practising certificate number auto-footer
Insurance Broking	Enquiry → Quote → Bound → Active Policy → Renewal → Claim	Policy Number, Insurer, Policy Type, Sum Insured, Renewal Date	Quote comparison, renewal reminder, claim lodged update	Policies Bound, Premium Pipeline, Retention Rate, Open Claims	AFSL/ASIC disclosure auto-footer
Recruitment & Labour Hire (e.g. WorkConnex)	Vacancy Received → Sourcing → Shortlist Sent → Interview → Offer → Placed	Role Title, Client Company, Placement Fee %, Candidate Availability, Work Rights	Candidate submission, interview confirmation, offer letter, placement invoice	Open Vacancies, Time-to-Fill, Placements/Month, Fee Pipeline	Labour hire licence number auto-footer
Migration & Education Consulting (e.g. EduConnex)	Enquiry → Assessment → Application Lodged → Outcome Received → Enrolled	Visa Subclass / Course, Country, Institution, Agent Commission	Assessment outcome, document checklist, lodgement confirmation, welcome pack	Applications in Progress, Approval Rate, Enrolments, Commission Pipeline	MARA agent registration auto-footer
Trades & Home Services (e.g. NatureConnex)	Enquiry → Site Visit → Quote Sent → Job Scheduled → Job Complete → Invoiced	Job Address, Job Type, Quote Amount, Scheduled Date, Crew Assigned	Quote follow-up, job reminder SMS, job-complete invoice, review request	Jobs This Week, Quote-to-Job Conversion, Revenue/Job	—

Industry	Pipeline / Stages	Key Custom Fields	Starter Template Pack	Dashboard KPIs	Compliance Footer
Marketing & Creative Agencies	Enquiry → Proposal Sent → Contract Signed → Onboarded → Active Retainer → Offboarded	Retainer Value, Services Included, Contract Start/End	Proposal, onboarding welcome, monthly report, renewal reminder	MRR, Active Retainers, Churn Rate	—
Generic / Custom	Fully blank — built in the Onboarding Wizard or cloned from the nearest preset	Defined by admin in CRM Configuration	Built from the Templates Library from scratch	Defined by admin in Dashboard Builder	Defined by admin

Additional verticals can be added to the preset list at any time as a Change Request (Contract Annexure E) without altering the core engine.

4. DASHBOARD

Dashboard

The landing screen — the first thing every user sees, so it is built to answer "what needs my attention today" at a glance rather than just showing static totals. Widget set adapts automatically per Section 3 industry selection.

Fields: Total Leads, Total Contacts, Total Companies, Total Deals, Pipeline Value, Won Deals Value, Open Tasks Count, Overdue Tasks Count, Activities Today, Conversion Rate, plus industry-specific widgets (see Section 3.2).

Actions: View Dashboard, Refresh Data, Customize Widgets, Rearrange Widgets, Filter by Date Range/Owner/Team, Export Dashboard Report, Set Default Dashboard, Save Multiple Dashboard Layouts per Role.

5. WORK QUEUE

A dynamic, auto-prioritised queue of tasks, calls, follow-ups, and activities due today or overdue for the logged-in user or their team, pulled live from Tasks, Calls, and Reminders — the single screen a rep should be able to work from all day without hunting across modules.

6. SALES

6.1 Leads

Captures and qualifies every inbound or imported prospect before conversion, with the field set and status options automatically matched to the selected industry (Section 3).

Fields: Lead ID (auto), First Name*, Last Name*, Email*, Phone, Company, Company Website, Industry, Company Size, Job Title, Lead Source (Website/Referral/Social Media/Email Campaign/Cold Call/Other), Status* (New/Contacted/Qualified/Unqualified/Converted), Owner*, Created/Modified Date, Notes, Product Interest, Budget Range, Estimated Value, IsConverted, ConvertedAt, ConvertedContactId, ConvertedDealId, ConvertedCompanyId, plus industry-specific custom fields.

Actions: Add/Edit/Delete Lead, Convert to Deal, Assign Owner, Change Status, Add Note, Send Email, Import (CSV/Excel/Google Sheets/Meta Ads/Google Ads/TikTok/Direct Form), Export, Bulk Assign/Delete/Change Status, Filter/Search/Sort, View Detail, Kanban View, Lead Scoring (AI, Section 24).

Kanban View

Dynamic status columns; card shows Name, Company, Email, Phone, Owner, Created Date; quick card actions for Call, Email, SMS, Notes, Tasks, and Appointments.

Import

Upload File → Map Fields → Validate → Preview → Confirm → Error Report. Settings: skip duplicates by email, update existing leads, assign default owner/status/source.

6.2 Contacts

Converted or standalone individuals the business has an ongoing relationship with — the record every other module (Deals, Tickets, Documents, Conversations) hangs off.

Fields: Contact ID, First Name*, Last Name*, Email*, Phone, Mobile, Lead Source, Status* (Active/Inactive/Unsubscribed), Owner*.

Actions: Add/Edit/Delete, Merge Contacts, Assign Owner, Change Status, Add Note, Send Email, Log Call, Schedule Meeting, Import/Export, Bulk Assign/Delete/Change Status, Filter/Search, View Detail, Link to Company/Deal, View Full Timeline (every email, call, note, and message in one feed).

6.3 Companies

Organisation-level records linked to contacts and deals, used to track relationships at the account rather than the individual level.

Fields: Company ID, Company Name*, Website, Industry, Company Size, Annual Revenue, Phone, Address/City/State/Country, Status* (Active/Inactive/Prospect/Customer/Partner), Owner*, Notes.

Actions: Add/Edit/Delete, Merge Companies, Assign Owner, Change Status, Add Note, View Related Contacts/Deals, Import/Export, Bulk Assign/Delete/Change Status, Filter/Search, View Detail.

6.4 Deals

Sales opportunities tracked through a configurable pipeline to Closed Won/Lost, with stage names, probability weighting, and required fields adapted per industry (Section 3.2).

Fields: Deal ID, Deal Name*, Account*, Contact, Lead Source, Stage* (Prospecting/Qualification/Proposal/Negotiation/Closed Won/Closed Lost or industry-specific equivalent), Probability, Expected/Actual Close Date, Deal Value*, Currency*, Owner*, Description, Lost Reason (Price/Feature/Competitor/No Budget/No Response/Other), Competitor.

Actions: Add/Edit/Delete, Change Stage/Owner, Update Probability, Set Close Date, Mark Won/Lost, Add Note/Activity/Task, Send Email, Import/Export, Bulk Update Stage/Owner/Delete, Clone Deal, Filter/Search, View Detail, Pipeline/Kanban Board.

Kanban / Pipeline Board

Columns by stage with per-column totals, deal count, and weighted forecast (Value × Probability); drag-and-drop stage change, quick edit/view, filter by owner/close date/value.

Import

Skip duplicates by Deal Name + Account, update existing deals, default owner/stage/currency, auto-calculate probability by stage.

6.5 Sales Forecasting & Territory Management

Rolls individual deals up into a forward-looking revenue view and lets larger teams split ownership by geography, industry, or book of business — the layer Zoho sells as a separate "Forecasting" module.

Fields: Forecast Period (Month/Quarter/Year), Forecast Category (Pipeline/Best Case/Committed/Closed), Territory Name, Territory Rules (Region/Postcode/Industry/Account Size), Territory Owner, Quota.

Actions: Set Team/Individual Quotas, View Forecast Roll-Up by Owner/Team/Territory, Compare Forecast vs Actual, Define Territory Rules, Auto-Assign Leads/Deals by Territory, Export Forecast Report.

7. ACTIVITIES

7.1 Tasks

The universal to-do — anything actionable in the CRM can spawn a Task, and every Task can spawn a Notification.

Fields: Task ID, Task Name*, Related To (Lead/Contact/Company/Deal), Task Type* (Call/Email/Meeting/Follow-up/Demo/Research/Other), Priority* (High/Medium/Low), Status* (Not Started/In Progress/Completed/Deferred/Cancelled), Due Date*, Reminder Date, Assigned To*, Created By, Description, Completed Date, Notes, Collaborators.

Actions: Add/Edit/Delete, Mark Complete/In Progress, Reassign, Set Reminder, Snooze, View Related Record, Filter/Search, Calendar View, Kanban View, Task Timeline, Bulk Complete/Reassign/Delete, Export, Clone.

7.2 Calls

Logs every inbound or outbound call, whether manually entered or captured automatically via click-to-call/Twilio integration.

Fields: Call ID, Subject*, Related To, Contact, Call Type* (Inbound/Outbound/Missed/Voicemail), Status* (Scheduled/Completed/No Answer/Voicemail Left/Cancelled), Date*, Duration, Notes, Assigned To*.

Actions: Log/Edit/Delete, Schedule, Mark Completed, Add Notes, View Related Record, Filter/Search, Export, AI Call Transcription & Summary (Section 24).

7.3 Messages

Internal or external chat-style messages, also usable inside automations and workflows (GoHighLevel-style unified send).

Fields: Message ID, Type* (Internal/External/System), Subject*, Body*, From, To, Related To, Status (Draft/Sent/Delivered/Read/Failed), Sent Date, Templates.

Actions: Compose/Send/Edit Draft/Delete, View Thread, Reply, Forward, Mark Read, Filter/Search, Export.

7.4 Emails

Full email client inside the CRM — every sent/received message auto-attaches to the matching Lead, Contact, or Deal timeline.

Fields: Email ID, Subject*, Body*, From, To*, CC, BCC, Related To, Template Used, Status (Draft/Scheduled/Sent/Delivered/Opened/Bounced/Failed), Sent/Opened Date.

Actions: Compose/Send/Schedule/Save Draft/Edit/Delete, Use Template, Attach File, Track Opens, Reply/Reply All/Forward, Filter/Search, Export.

7.5 Meetings

Scheduling and logging for all meeting types, feeding the Calendar and Booking & Scheduling module (Section 8).

Fields: Meeting ID, Title*, Related To, Type* (In-person/Video Call/Phone Call/Conference), Start/End DateTime*, Location, Meeting Link, Attendees, Organizer*, Status* (Scheduled/In Progress/Completed/Cancelled/Rescheduled), Agenda, Notes.

Actions: Schedule/Edit/Cancel/Reschedule, Send Invites, Add/Remove Attendees, Log Notes, Mark Completed, View Calendar, Filter/Search, Export.

7.6 Notes (internal)

Free-text notes attached to any record — the raw material AI turns into summaries and follow-up tasks (Section 24.1).

Fields: Note ID, Title, Body*, Related To*, Note Type (General/Call Summary/Meeting Notes/Follow-up/Other), Created By, Is Private.

Actions: Add/Edit/Delete, Pin, Make Private/Public, View Related Record, Filter/Search.

7.7 Reminders

Standalone or auto-generated nudges so nothing due gets missed, deliverable through the channel the user actually checks.

Fields: Reminder ID, Title*, Related To, Date/Time*, Type* (Task Due/Meeting Start/Follow-up/Custom), Status (Pending/Dismissed/Snoozed/Triggered), Notification Method* (In-app/Email/Push/SMS).

Actions: Set/Edit/Delete, Dismiss, Snooze, View Related Record, Filter/Search, Export.

7.8 Calendar

Aggregated view of Events, Tasks, Meetings, and Reminders across a selected date range, syncable with external calendars.

Fields: Calendar View, Date Range, Events, Tasks, Meetings, Reminders (all system-aggregated).

Actions: Day/Week/Month/Agenda View, Add/Edit/Delete Event, Drag to Reschedule, Filter by Type/Owner, Sync with External Calendar (Google/Outlook), Share Calendar, Export Calendar.

7.9 Internal Team Chat

Slack-style real-time team messaging, kept separate from client-facing channels so internal chatter never leaks externally.

Actions: Create a task directly from any chat message; task notifications route into the Messages area.

8. BOOKING & SCHEDULING

A Calendly-style public booking page for every user or team, so a lead can self-book a call or appointment straight from an email, SMS, WhatsApp message, or Linktree page — without a single back-and-forth email.

Fields: Booking Page URL, Event Type (Call/Meeting/Site Visit/Consultation), Duration, Availability Rules, Buffer Time, Location/Video Link, Booking Questions, Confirmation/Reminder Template.

Actions: Create/Edit Booking Page, Set Availability & Buffer Rules, Publish Booking Link, Embed on Forms/Linktree, Auto-Create Lead/Contact on Booking, Send Confirmation & Reminder (Email/SMS), Sync to Calendar, Allow Reschedule/Cancel Self-Service, View Booking Analytics.

9. DOCUMENTS

9.1 Document Library

Central, searchable file store for the whole CRM — separate from Document Requests below — so nothing lives only on someone's laptop.

Fields: File Name, Folder, Owner, Related Record, Version, Tags, Uploaded Date, Access Level.

Actions: Upload/Download/Delete, Version History, Move/Rename, Tag, Link to Record, Share, Search/Filter.

9.2 Document Requests

A structured, trackable way to chase a client for a document instead of an untracked email thread.

Fields: Request ID, Title*, Requested From*, Related To, Document Type* (Contract/Proposal/ID Proof/Financial/Legal/Other), Status* (Requested/Pending/Received/Approved/Rejected/Expired), Due Date, Requested By, Requested/Received Date, Notes.

Actions: Create/Edit/Cancel Request, Send Reminder, Upload Received Document, Approve/Reject, View Detail, Filter/Search, Export.

9.3 E-Signature

Native e-signature so contracts, engagement letters, and proposals close without leaving the CRM or paying for a third-party DocuSign licence.

Fields: Signature Request ID, Document Name*, Document File*, Signer*, Related To, Status (Draft/Sent/Viewed/Signed/Declined/Expired/Cancelled), Sent/Signed/Expiry Date, IP Address, Signature Image, Created By.

Actions: Upload Document, Add Signature Fields, Send for Signature, Cancel/Resend, View/Download Signed Document, View Audit Trail, Filter/Search, Export Log.

10. CAMPAIGNS & OMNI-CHANNEL MESSAGING

10.1 Email Campaigns

Bulk and drip email marketing built on the Templates Library (Section 25), scored against the same open/click analytics as Zoho Campaigns or Mailchimp.

Fields: Campaign ID, Name*, Type* (Newsletter/Promotional/Drip/Automated/One-time), Status (Draft/Scheduled/Running/Paused/Completed/Cancelled), Audience*, Email Template*, Subject Line*, From Name/Email*, Scheduled Date, Sent/Open/Click/Bounce/Unsubscribe Counts.

Actions: Create/Edit/Delete/Schedule/Launch/Pause/Resume/Cancel/Duplicate/Preview, Test Send, View Analytics, Export Report, Filter/Search.

10.2 SMS Campaigns

Fields: Campaign ID, Name*, Type* (Promotional/Transactional/Reminder/Automated), Status, Audience*, Message Body*, Scheduled Date, Sent/Delivered/Failed/Reply Counts.

Actions: Create/Edit/Delete/Schedule/Launch/Pause/Resume/Cancel/Duplicate/Preview, Test Send, View Analytics, Export Report, Filter/Search.

10.3 WhatsApp Campaigns

Broadcast messaging over the WhatsApp Business API, subject to Meta's template pre-approval rules — a channel neither Zoho nor HoneyBook natively supports.

Fields: Campaign ID, Name*, Approved WhatsApp Template*, Audience*, Scheduled Date, Sent/Delivered/Read/Failed/Reply Counts.

Actions: Create/Edit/Delete/Schedule/Launch/Pause/Cancel, Submit Template for Meta Approval, View Analytics, Export Report.

10.4 Unified Social Inbox

One CRM inbox that pulls in every conversation from every channel — not SMS/Email alone — so no client message is ever missed or scattered across five different apps and logins.

Fields: Conversation ID, Channel (Facebook Messenger / Instagram DM / WhatsApp / SMS / Email / Web Chat), Contact/Lead Link, Assigned Agent, Status (Open/Pending/Resolved), Last Message Preview, Unread Count, Timestamp.

Actions: Connect/Disconnect a Channel (Facebook Page, Instagram Business Account, WhatsApp Business number), View Unified Inbox, Reply In-Thread on the Native Channel, Assign Conversation to an Agent/Team, Auto-Link Sender to an Existing Lead/Contact or Auto-Creat a New Lead, Tag/Label Conversation, Insert Quick-Reply Template, Mark Read/Unread, Filter by Channel/Status/Agent, Merge Duplicate Threads, Archive/Close Conversation, Conversation-Level Notes.

How it works

Facebook and Instagram connect via the Meta Graph API (Page + Instagram Business Account); WhatsApp connects via the WhatsApp Business API. Every inbound DM, comment-to-DM, or WhatsApp message lands in the same inbox screen as SMS and Email, threaded against the matching CRM record. Outbound replies are sent back through the native channel from inside the CRM, so the conversation continues seamlessly for the customer on their own app.

11. SUPPORT

Support Ticketing

A full helpdesk inside the CRM so post-sale issues are tracked with the same rigour as the sales pipeline, feeding the Customer Satisfaction Score on Analytics.

Fields: Ticket ID, Subject*, Requester*, Related Account, Priority* (Critical/High/Medium/Low), Status* (New/Open/In Progress/Pending/Resolved/Closed/Reopened), Category (Bug/Feature Request/Billing/Technical/General), Assigned To, Resolved/Closed Date, Description*, Internal Notes, Satisfaction Rating & Comment.

Actions: Create/Edit/Delete, Assign, Change Priority/Status, Add Internal Note/Public Reply, Merge/Escalate, Mark Resolved/Closed, Reopen, Send Satisfaction Survey, View History, Filter/Search, View Detail, Export.

12. CLIENT PORTAL

Client Portal

A branded, secure self-service window into the CRM for external clients — view deal status, sign documents, pay invoices, and raise tickets without ever emailing to ask "where are we up to?"

Fields: Portal ID, Name*, Client*, Portal URL, Status* (Active/Inactive/Suspended), Access Level* (Full/Limited/Read-only), Allowed Modules (Deals/Documents/Tasks/Tickets/Invoices/Reports), Primary Contact*.

Actions: Create/Edit/Deactivate/Suspend, Reset Password, Send Invite, Manage Access, Configure Modules, View Activity, Filter/Search, Export.

13. PROPOSAL-TO-PAYMENT WORKFLOW

HoneyBook's signature strength is turning Proposal → Contract → Invoice → Payment into one continuous flow instead of four disconnected tools. The Platform matches this by chaining the modules below into a single client-facing journey, while keeping each piece (Section 20) usable standalone.

13.1 Estimates

Create, edit, send, and track estimates linked to deals and contacts — the opening move in the flow.

13.2 Quotations

Convert an accepted estimate into a formal quotation with line items and pricing.

13.3 Contract / E-Signature

Attach the contract or engagement letter and send for signature (Section 9.3) without leaving the quote screen.

13.4 Sales Invoice

Generate the invoice automatically from the signed quote; track payment status against it.

13.5 Payment

Client pays directly from the invoice or Client Portal via the connected payment gateway (Stripe/PayPal/local gateway) — the whole cycle from first quote to cleared payment happens inside one screen and one client link.

13.6 Items / Services

The shared product/service catalogue with pricing that feeds every Estimate, Quotation, and Invoice above, so pricing only has to be maintained in one place.

14. REPORTS

Reports

Ad hoc and scheduled reporting across every data source in the CRM, exportable in the formats finance and management teams actually need.

Fields: Report ID, Name*, Type* (Lead/Deal/Activity/Revenue/Pipeline/Conversion/Custom), Data Source*, Date Range*, Filters, Group By, Sort By, Created By, Last Run Date, Schedule (None/Daily/Weekly/Monthly).

Actions: Create/Edit/Delete/Run/Schedule, Export to PDF/Excel/CSV, Save as Template, Share, Email Report, Filter/Search, View Detail.

15. ANALYTICS

Analytics

Pre-built performance intelligence so management doesn't need to build a report from scratch to answer "how are we tracking?"

Fields: Lead Conversion Rate, Deal Win Rate, Average Deal Size, Sales Cycle Length, Pipeline Velocity, Revenue by Source/Owner/Month, Top Performing Users, Activities Completed, Tasks Overdue Rate, Email Open Rate, Campaign ROI, Support Ticket Resolution Time, Customer Satisfaction Score.

Actions: View Dashboard, Filter by Date/Team/Owner, Drill Down, Export Chart/Data, Set Benchmarks, Compare Periods, Share Analytics.

16. RESOURCES

Resources

An internal knowledge hub for sales collateral, training material, and playbooks, so reps always use the current version of a document.

Fields: Resource ID, Name*, Type* (Document/Video/Image/Link/Template/Guide/FAQ), Category (Sales/Marketing/Support/Product/Training/Legal), File/URL*, Description, Tags, Access Level* (Public/Internal/Restricted), Uploaded By, Upload Date, Download Count.

Actions: Upload/Edit/Delete/Download/Share, Filter by Type/Category/Access, Search, View Detail, Export List.

17. CALCULATOR

Calculator

Built-in calculators so a rep can answer a client's numbers question without switching to a spreadsheet mid-call.

Fields: Calculator Type* (Commission/ROI/Discount/Tax/Currency/Loan/Custom), Input Fields (dynamic per type), Output Result, Currency, Formula.

Actions: Select Calculator, Enter Values, Calculate, Reset, Save Calculation, Export Result, Share Calculation, View History.

18. NOTIFICATIONS

Notifications

The system's nervous system — every important state change surfaces here instead of relying on someone remembering to check.

Fields: Notification ID, Type (Task Assigned/Deal Won/Lead Assigned/Meeting Reminder/Ticket Updated/Campaign Sent/System Alert/Mention), Title, Message, Related To, Recipient, Status (Unread/Read/Dismissed), Sent/Read Date.

Actions: View, Mark as Read/Mark All Read, Dismiss, View Related Record, Filter by Type/Status, Notification Settings, Export Log.

19. CUSTOMER JOURNEY & LIFECYCLE AUTOMATION

A visual, drag-and-drop journey builder that sits on top of Workflow Automation (Section 27.4) — instead of building isolated automations, an admin maps the whole client lifecycle (e.g. New Lead → Nurture Sequence → Booked Call → Proposal Sent → Won → Onboarding → Renewal) as one flow, with branching logic and multi-channel steps.

Fields: Journey Name, Trigger (Lead Created/Deal Stage Change/Form Submitted/Date-Based/Manual), Steps (Wait/Send Email/Send SMS/Send WhatsApp/Create Task/Update Field/Branch Condition), Exit Conditions.

Actions: Build/Edit Journey (drag-and-drop canvas), Activate/Pause Journey, Clone Journey, Test Run, View Enrolled Contacts per Step, View Conversion Rate per Step, Exit Contact Manually.

20. SALES OPERATIONS (FINANCE)

The standalone view of the modules chained together in Section 13, for teams that want to use them independently of the full proposal-to-payment flow.

20.1 Estimates

Actions: Create, edit, send, and track estimates linked to deals and contacts.

20.2 Quotations

Actions: Create, edit, send, and track quotations with line items and pricing.

20.3 Sales Invoices

Actions: Generate and send sales invoices; track payment status.

20.4 Payments

Actions: Record and track payments against invoices; payment gateway integration.

20.5 Items / Services

Actions: Product and service catalogue with pricing for use in estimates, quotes, and invoices.

21. FORMS

HoneyBook- and GoHighLevel-style embeddable forms with configurable fields and conditional logic; submissions route automatically into the matching CRM module (Lead, Contact, Ticket, etc.) and can trigger a Customer Journey (Section 19) on submit.

22. LINKTREE / BROKER PROFILE PAGES

Each broker or agent can publish their own Linktree-style public page — bio, photo, contact links, Booking & Scheduling link (Section 8), and social/WhatsApp links — fully configurable per user, and usable as the single link they put in an email signature or Instagram bio.

23. TIME TRACKING

Billable-hours tracking for professional-services verticals (Accounting, Legal, Agencies) where invoicing is time-based rather than fixed-fee.

Fields: Time Entry ID, Related To (Matter/Deal/Ticket/Project), User, Date, Duration, Billable (Yes/No), Rate, Description.

Actions: Start/Stop Timer, Log Time Manually, Mark Billable/Non-Billable, Approve Time Entries, Generate Invoice from Logged Time, Filter/Search, Export Timesheet.

24. ARTIFICIAL INTELLIGENCE (AI)

AI is woven through the Platform as an assistive layer, not a bolt-on module — it appears wherever the user is writing, reading, or triaging something, matching or exceeding Zoho's Zia in scope while remaining native rather than a paid add-on.

24.1 AI in Notes

- Auto-summarise long call and meeting notes into a short summary + action items.
- Auto-tag notes with sentiment (positive/neutral/negative) and topic.
- Suggest a follow-up task directly from a note's content.

24.2 AI in Email

- Smart Compose — draft a full email from a short instruction ("follow up on the FHB quote").
- Reply suggestions — 2–3 ready-to-send reply options generated from the incoming email thread.
- Tone/length adjustment (formal, friendly, shorter, longer) on any drafted email.
- Thread summarisation for long back-and-forth email chains.
- Subject line suggestions optimised for open rate.

24.3 AI SMS / WhatsApp / Social Bot

- Automated first-response bot on SMS, WhatsApp, Facebook Messenger, and Instagram DM — answers FAQs, captures basic lead details, and qualifies before handing off.
- Configurable handoff rules — bot hands the conversation to a human agent on keyword, sentiment, or after N exchanges.
- Bot conversation transcript saved to the Unified Social Inbox thread and linked to the Lead/Contact record.
- Business-hours vs after-hours bot behaviour (e.g., after-hours auto-reply with next available time).

24.4 AI in Templates

- Generate a first draft of any Email, SMS, WhatsApp, or Marketing template from a short prompt.
- Rewrite/improve an existing template (tone, length, compliance wording).
- Auto-fill personalisation tokens (name, product, stage) and suggest merge fields.
- A/B subject line and message variant generation for campaigns.

24.5 Other AI Uses Across the Platform

- Lead scoring — predictive score based on engagement, source, and profile data.
- Deal win-probability / risk flag on the pipeline board.
- Next-best-action suggestions on Leads and Deals (e.g., "this lead has gone quiet — call today").
- Call transcription and auto-summary for logged Calls.
- Meeting summary and action items generated from Meeting notes/recording.
- Document/E-Signature content summarisation for quick review.
- Duplicate lead/contact detection using fuzzy matching.
- AI search — natural-language search across the whole CRM ("show me deals over \$500k closing this month").
- AI assistant inside the Client Portal for basic client self-service Q&A.

24.6 AI Settings (Settings → AI)

- AI Providers — connect one or more model providers (e.g., OpenAI, Anthropic, Google).
- AI Models — select the model used per feature (e.g., faster/cheaper model for auto-tagging, stronger model for drafting).
- AI Prompts — library of reusable, editable system prompts per feature.
- AI Templates — saved prompt + output templates for repeatable tasks.
- AI Permissions — role-based control over who can use which AI feature.
- AI Usage & Credits — usage tracking and credit/quota management per user or team.
- AI Logs — full audit log of AI requests and outputs for compliance review.

25. TEMPLATES LIBRARY

A central, categorised library so every outbound message — marketing or transactional — is built from an approved, on-brand starting point rather than written from scratch each time. Industry selection (Section 3) pre-loads the starter pack; the Marketplace (25.6) adds more.

25.1 Email Templates

- General/transactional templates: welcome email, document request, meeting confirmation, thank-you, follow-up.
- Marketing templates: newsletter, promotional offer, drip-sequence steps, event invite, re-engagement.
- Merge fields (name, deal, stage, broker), category tags, preview, test send, version history, AI-assisted drafting (see 24.4).

25.2 Marketing / Campaign Templates

- Reusable layouts for Email and WhatsApp campaigns, drip sequences, and newsletters, with drag-and-drop content blocks.
- Approval workflow before a marketing template can be used in a live campaign.

25.3 SMS & WhatsApp Templates

- Short-form SMS templates with character-count guide.
- WhatsApp templates that follow Meta's WhatsApp Business template categories (Marketing / Utility / Authentication) and submission-for-approval workflow.

25.4 Document, Proposal, Quote & Invoice Templates

- Branded templates for Documents, Proposals, Quotations, and Invoices with merge fields and company branding.

25.5 Task & Workflow Templates

- Pre-built task checklists and multi-step workflow templates that can be applied to a Lead, Deal, or Ticket in one click.

25.6 Template Marketplace

- Browse and install additional industry template packs beyond the 10 presets in Section 3 (e.g., a second Accounting pack tuned for bookkeeping-only firms).
- Internal template packs can be built and shared across Connex Group workspaces via the Workspace Switcher (Section 3.1).

26. ONBOARDING WIZARD & GUIDED SETUP

The guided, step-by-step flow every new account walks through on first login: industry selection (Section 3), company profile, user invites, email/SMS/WhatsApp connection, payment gateway connection, and starter data import — with progress saved so setup can be finished later.

Actions: Select Industry, Import Existing Data (CSV/Excel/Other CRM), Connect Email/SMS/WhatsApp/Social Channels, Connect Payment Gateway, Invite Team Members, Assign Roles, Review & Publish Starter Templates, Mark Setup Complete.

27. SETTINGS

Settings is organised into 19 sections, each covering a distinct area of platform configuration.

27.1 Organization

Company Profile, Branding, Business Information, Business Hours, Holidays, Time Zone, Language, Currency, Regional Settings (Date/Time/Number Format), Multi-Currency, Multi-Language, Themes, Dark Mode, Accent Colors, Sidebar Layout, White Label, Email Branding, Login Page Branding, Favicon.

27.2 Users & Access

Users, Teams, Departments, Roles, Permissions, Reporting Hierarchy, User Groups, Login Sessions, User Activity.

27.3 CRM Configuration

Pipelines, Lead Statuses, Deal Stages, Lead Sources, Lost Reasons, Tags, Labels, Custom Fields, Custom Objects, Record Layouts, Record Types, Number Sequences, Duplicate Rules, Field Validation Rules — this is also where an Industry preset (Section 3) is edited after initial setup.

27.4 Workflow & Automation

Workflow Builder, Workflow Templates, Approval Workflows, Assignment Rules, Round Robin, SLA Rules, Escalation Rules, Scheduled Jobs, Automation Logs — the engine underneath the Customer Journey builder (Section 19).

27.5 Communication

Email Accounts, SMTP, IMAP, Email Signatures, Sender Profiles, Sending Domains, Phone Numbers, SMS Providers, WhatsApp, Call Settings, Calendar Settings — plus the Facebook Page / Instagram Business / WhatsApp Business connections that power the Unified Social Inbox (Section 10.4).

27.6 Templates

Central management for Email, SMS, WhatsApp, Message, Document, Proposal, Quote, Invoice, Task, and Workflow Templates (see Section 25).

27.7 Forms & Client Experience

Forms, Form Themes, Linktree, Client Portal, Public Pages, Custom Domains.

27.8 Finance

Taxes, Invoice Settings, Quote Settings, Payment Gateways, Commission Rules, Product Categories, Pricing Rules.

27.9 AI

See Section 24.6 for full detail — AI Providers, Models, Prompts, Templates, Permissions, Usage/Credits, Logs.

27.10 Integrations

Google, Microsoft 365, Outlook, Gmail, Google Calendar, Outlook Calendar, Zoom, Microsoft Teams, Twilio, Stripe, Xero, MYOB, QuickBooks, Google Drive, OneDrive, Dropbox, Zapier, Make, Webhooks, API Keys, OAuth Apps — plus Facebook, Instagram, and WhatsApp Business under Communication.

27.11 Security

Password Policy, Two-Factor Authentication, Single Sign-On (SSO), IP Restrictions, Device Management, Session Timeout, Login History, Audit Logs, Encryption, Data Retention, GDPR Settings, Privacy & Consent, Cookie Management, Data Residency, Consent Management.

27.12 Notifications

Email, SMS, Push, In-App Notifications, Notification Rules, Mentions, Digest Settings, Push Notification Settings, Mobile App Settings.

27.13 Reports & Analytics

Dashboard Builder, Report Templates, Scheduled Reports, KPI Targets, Forecast Settings, Dashboard Layout.

27.14 Data Management

Import Data, Export Data, Backup & Restore, Archive, Recycle Bin, Merge Records, Storage Usage, Scheduled Backups, Restore Points.

27.15 Marketplace

Installed Apps, Marketplace, Extensions, Themes, Template Marketplace (Section 25.6).

27.16 Subscription & Billing

Subscription Plan, Users, Storage, Usage, Billing, Payment Methods, Invoices, Add-ons.

27.17 Developer

API Keys, OAuth Apps, Webhooks, SDK, Event Logs, API Usage, Custom Scripts.

27.18 System

Feature Flags, Maintenance Mode, Queue Monitor (Email/SMS/Workflow), Background Jobs, System Health, Error Logs, Version, Enable/Disable Modules, Beta Features, Experimental Features, Global Search Settings, Search Index.

27.19 Help & Support

Knowledge Base, Product Updates, Training, Support Tickets, Contact Support, Release Notes.

Top Right of Settings

Search Settings, Favorites, Audit History, Quick Create, Help, My Preferences (profile, signature, password, notifications, theme).

28. CROSS-MODULE RULES

28.1 Data Integrity

- Email must be unique across Leads and Contacts.
- Deal Name + Account must be unique.
- Required fields cannot be left blank on creation.
- System fields are non-editable.
- Deleted records move to the Recycle Bin for unlimited retention.

28.2 Status / Stage Transitions

- Lead "Converted" is final.
- Deal "Closed Won" and "Closed Lost" are final.
- Ticket "Closed" can be reopened.
- Campaign "Completed" cannot be restarted.

28.3 Notifications

- Owner assignment triggers a notification.
- Status/Stage change triggers a notification.
- Deal close triggers a notification to owner + manager.
- Task due triggers a reminder notification.
- Ticket update triggers a notification to the requester.

28.4 Audit Trail

- All create/edit/delete actions logged with timestamp + user.
- Field-level change history visible in the record detail view.
- Login/logout and failed login attempts logged.

28.5 Permissions

- Role-based access control (RBAC) with hierarchy levels.
- Module-level, field-level, record-level (Owner/Team/Public), and action-level permissions.

— END OF SOFTWARE REQUIREMENTS SPECIFICATION —

ACKNOWLEDGEMENT

I confirm that I have read and understood the full scope of modules, fields, actions, and features described in this Software Requirements Specification (Sections 1–28), and agree that all of them will be built and completed as part of the Platform.
